

PIKKUTONTTU

PIKKUTONTTU

PLEASURE, FOR THE EYE TOO

The elegant Helo Pikkutonttu brings modest but necessary luxury to your sauna pleasure. First, the heater is sympathetically styled. Then you realize that every detail is in harmony. The Tonttu heater range has been specially created for Helo by renowned designer Ristomatti Ratia.

The Pikkutonttu warms about 70 kg of stones to give a luxurious soft heat that is released as healing steam when water is thrown on the stones. The super-insulated shell ensures that the mass of stones inside heats up just as fast as an ordinary heater.

The low operating temperature of the black exterior, and the small safety distances, provide ample opportunities for creative interior design. The low surface temperature makes for a stress-free experience when children also join the family sauna. The heater is installed solidly on the floor and fixed to a wall or floor.

Helo Pikkutonttu heaters are suitable for saunas with a capacity of 3-14 m³. Helo Pikkutonttu is 460 mm in diameter, 990 mm high, and weighs 33 kg. The heater is controlled by a Helo Easy, Helo Digi II or Midi digital controller.

TYPE	POWER (kW)	SAUNA SIZE (m ³)
PIKKUTONTTU 4 DE	4.5	3.0-6.0
PIKKUTONTTU 6 DE	6.6	5.0-10.0
