

Väggarna på layouten är även märkta med materialet. G=Glas, W=Träpanel, D=Glasdörr.

The pictures show two examples how to assemble the room. In the assembly instruction, layout 1 is described. The numbers show in what order the walls should be assembled. The walls on the layout are marked according to material: G=glass, W=Wooden panel, D=glass door.

Technical drawing of the L-shaped table showing dimensions and assembly points. The overall dimensions are 1325 mm by 1325 mm. The drawing includes numbered callouts (1-8) and lettered callouts (W, G, D) indicating specific components and assembly points. A small inset shows a detail of the table's corner joint.

1 Monterings av golvräm Assembly of floor frame

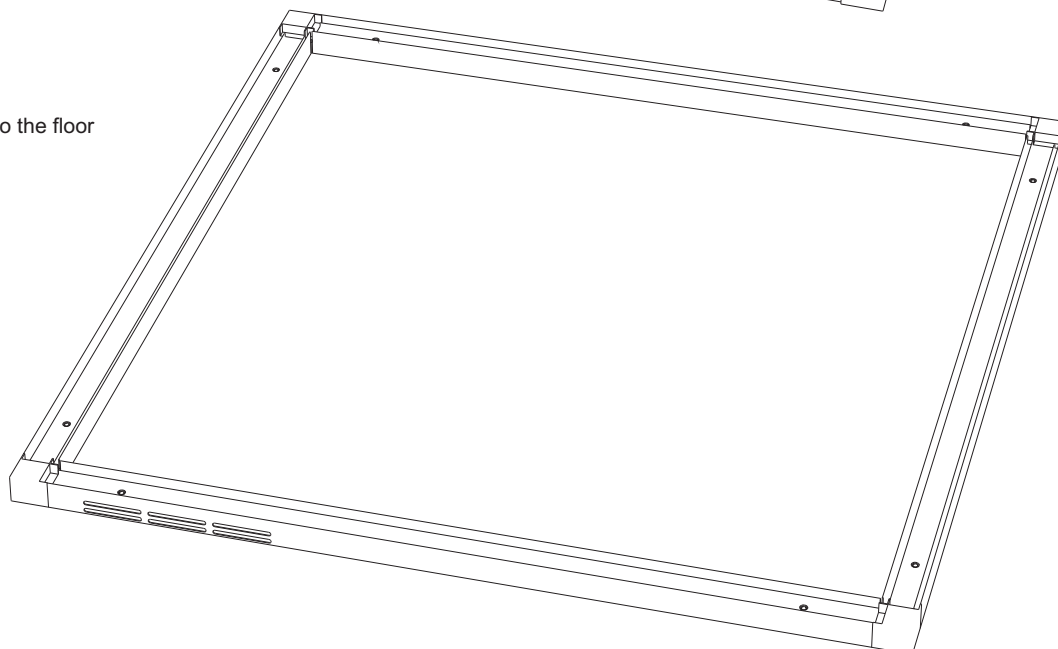

**OBS!
N.B.!**

Skjut in hörnknutarna i
golvrämsprofilerna.

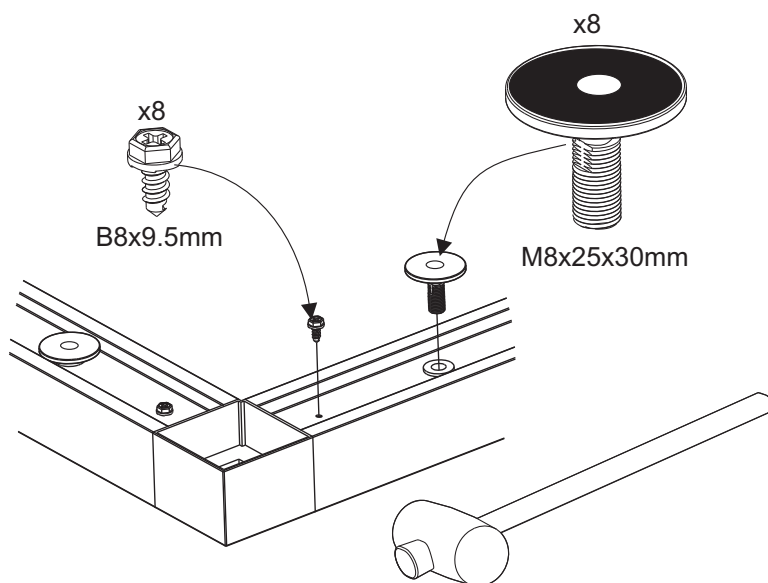

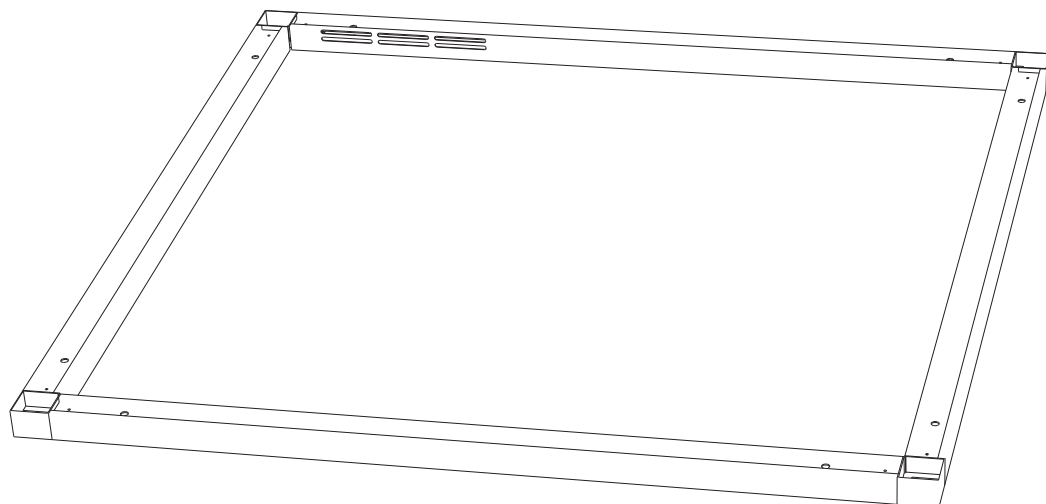

Push the corner joints in to the floor
frame profiles.

2

Vänd golvramen upp och ned. Banka in hörnknutarna i golvramsprofilerna så att de säkert går i botten. Skruva fast hörnknutarna och sätt dit ställföterna. Ställföterna skruvas i botten.

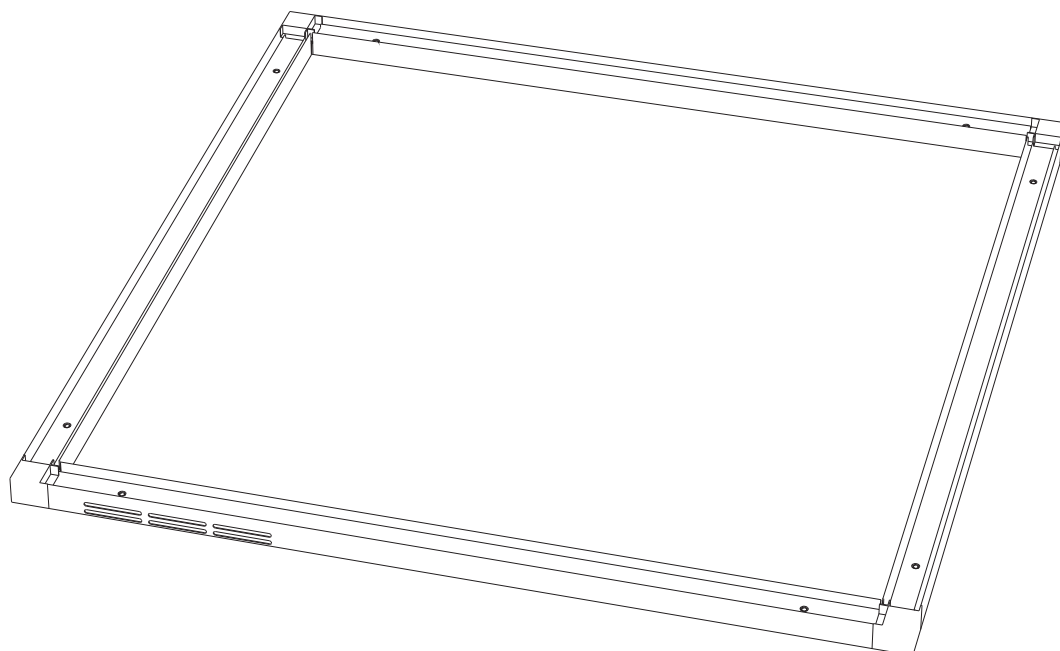

Turn the floor frame upside down. Hit the corner joints in to the floor frame profiles. Make sure they go all the way in. Fasten the corner joints and mount the adjustable feet all the way in.

3

Vänd tillbaka golvramen.

Turn the floor frame back.

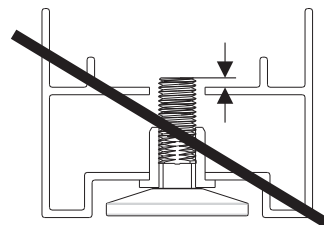

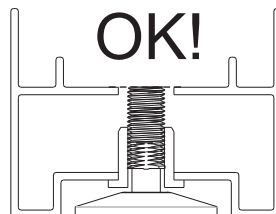

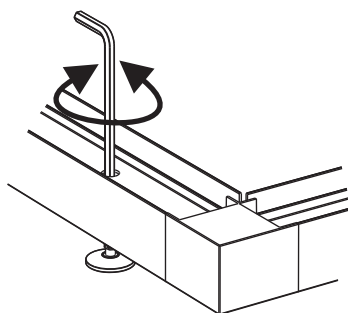

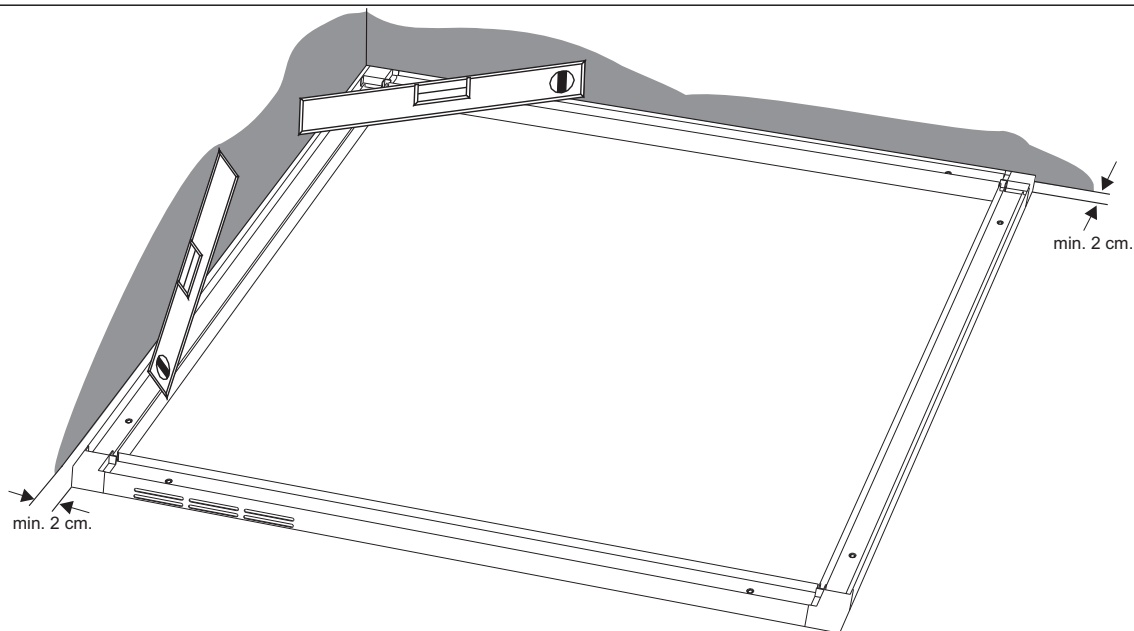

4

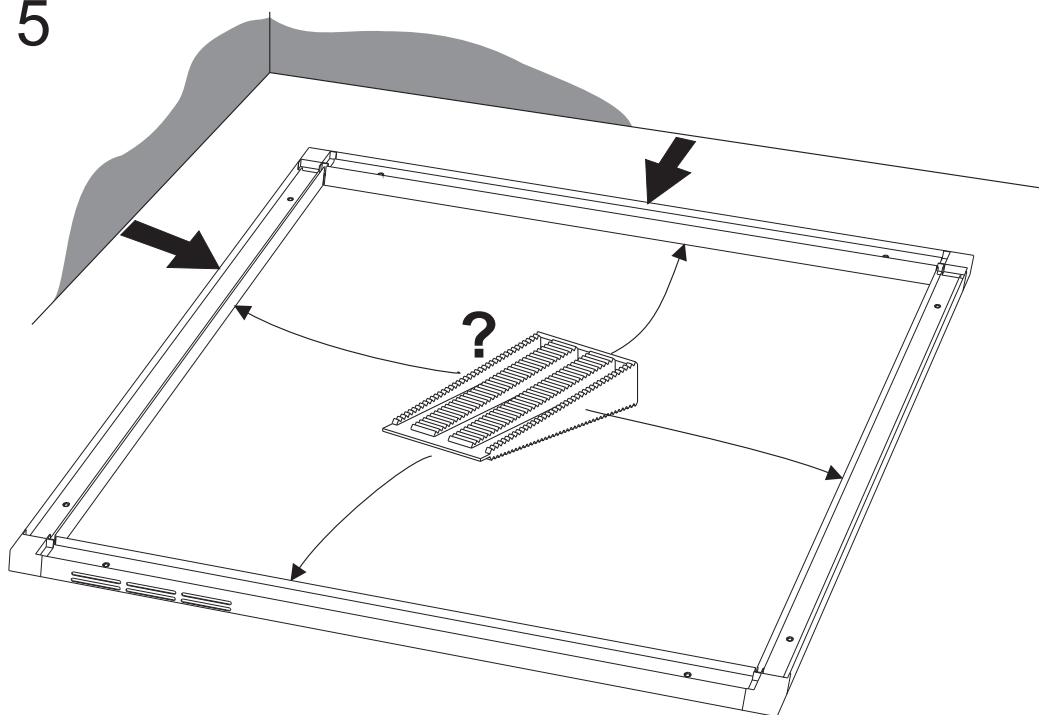

Placera golvramen där rummet ska stå. Kontrollera att ramen ligger plant, använd vattenpass. OBS! Det är ett absolut krav att golvramen ligger plant "i våg" för att slutresultatet ska bli perfekt. Justera ställföterna med insexnyckeln. Det är viktigt att ställfoten hamnar under ytan där väggarna ska stå.

Place the floor frame where the room should stand. Use a spirit level to ensure the floor frame is plane.

N.B! To reach a perfect result it is of utmost importance that the floor frame is completely Plane. Use the hex key to the adjustable feet. Make sure the screw from the adjustable feet is positioned according to picture.

5

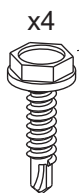

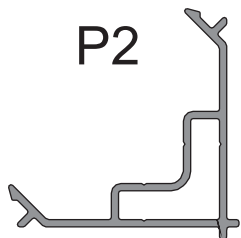

Flytta ut golvramen om den står nära en vägg för att lätt kunna montera väggarna. Om golvramen inte är plan när den flyttats, lägg under kilar på de ställen som behöver.

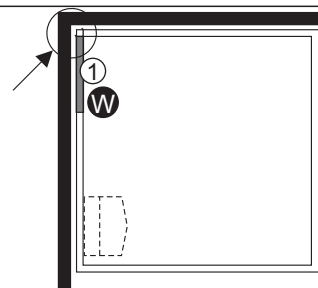

To make assembly easier, pull the floor frame out if it is close to a wall. If the floor frame is not plane when moved, use wedges when needed.

Kalibrering Hygrometer

Calibration Hygrometer

Kalibrierung Hygrometer

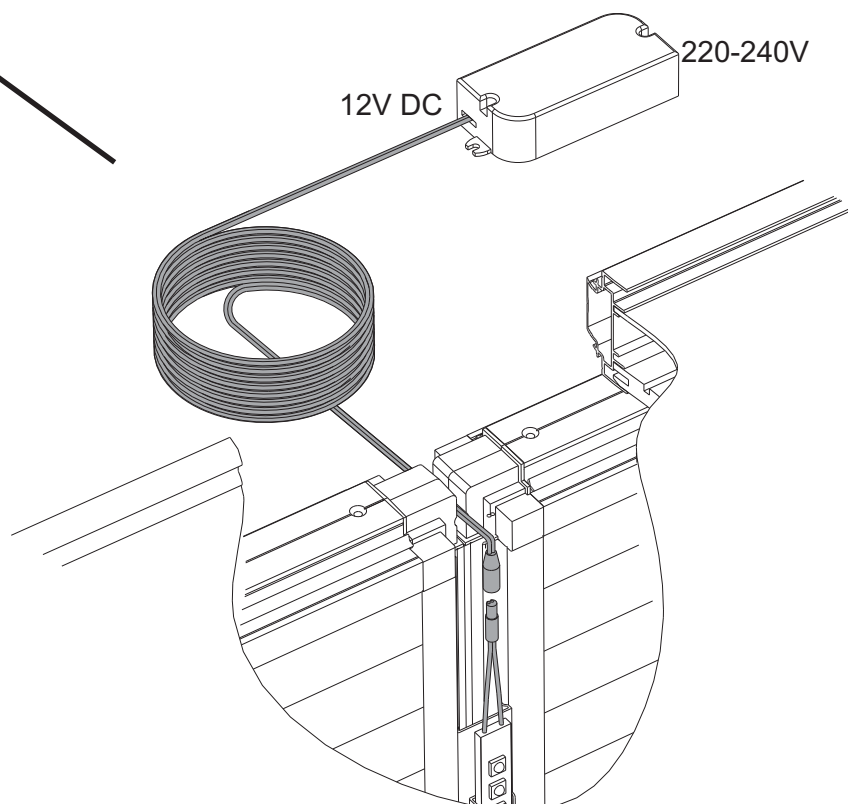

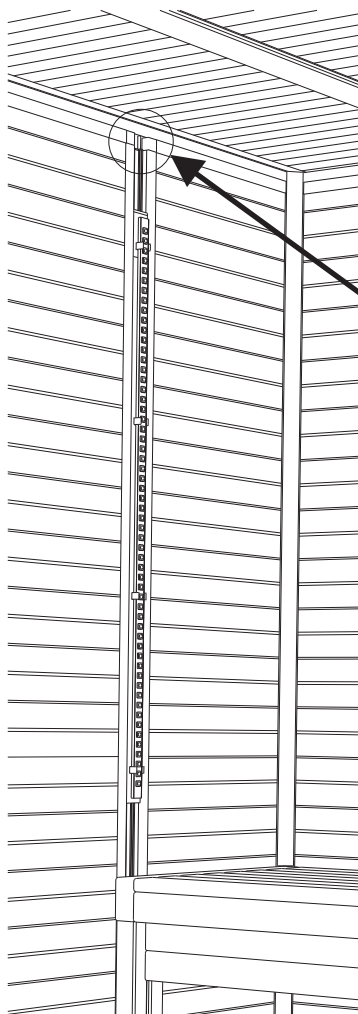

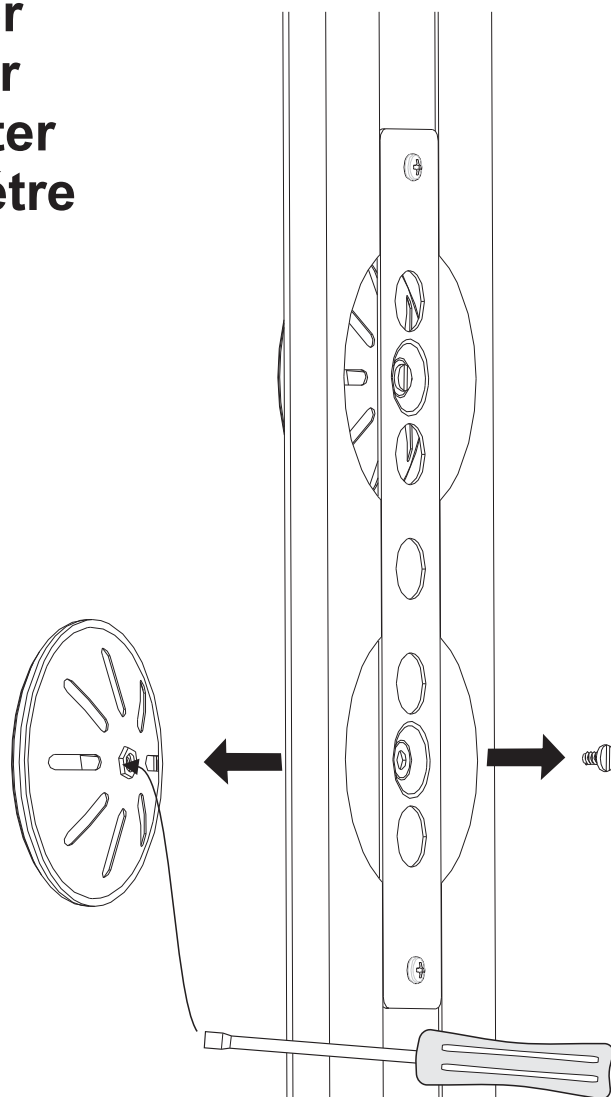

D'étalonnage Hygromètre

Placera hygrometern i helt torr bastu med en temperatur på ca 90°C. Hygrometern skall efter ca 90 minuter visa ca 12% RH. Visar den annat värde kan den kalibreras. Det gör man genom att vrida ställskruven så att visaren pekar på ca 12% RH.

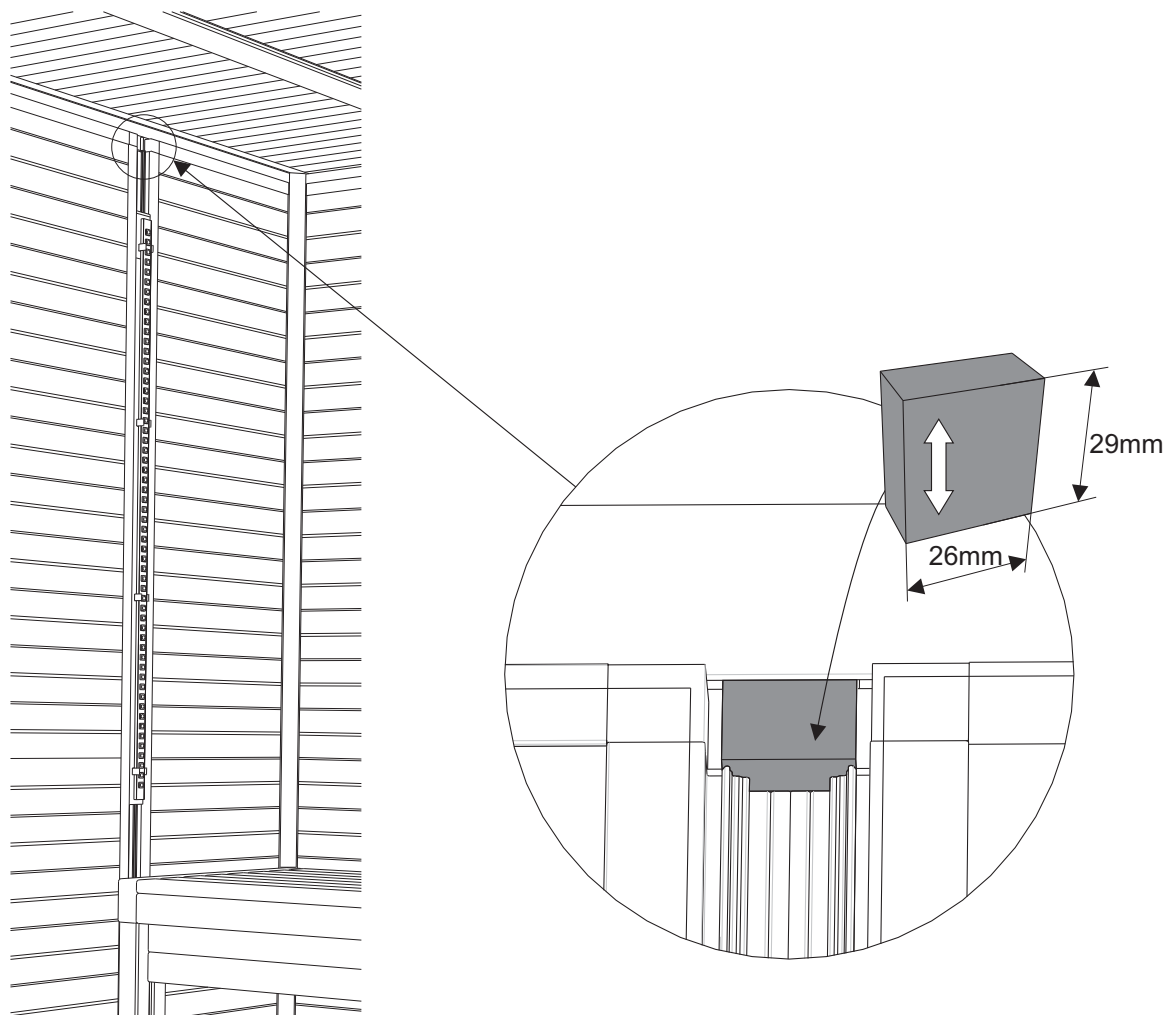

Place your hygrometer in a completely dry sauna heated to a temperature of 90°C (approx. 195°F). After 90 minutes or so the hygrometer reading should indicate a relative humidity (RH) of about 12%. If not, re-calibrate the hygrometer by adjusting the set screw until the pointer indicates 12% RH.

Hygrometer in die völlig trockene Sauna mit einer Temperatur von 90°C geben. Nach etwa 90 Minuten sollte der Hygrometer ca. 12% RH anzeigen. Wird ein anderer Wert angezeigt, ist der Hygrometer zu kalibrieren. Dies erfolgt durch Öffnen der Stellschraube und Einstellen des Zeigers auf 12% RH.

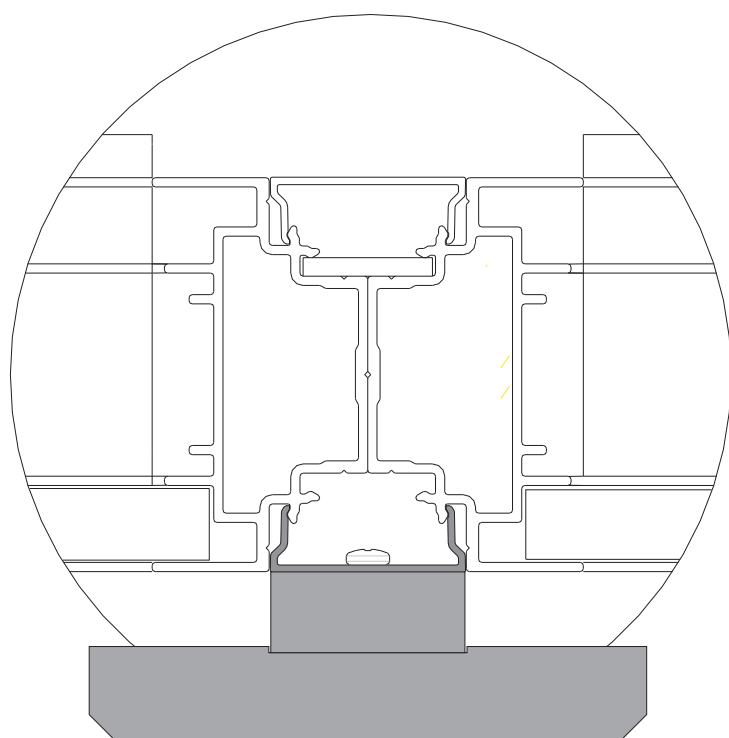

Placer l'hygromètre dans un sauna absolument sec dont la température est d'environ 90°C. Au bout d'environ 90 minutes, l'hygromètre doit indiquer environ 12% d'humidité relative. Le calibrer s'il indique une autre valeur. Pour ce faire, tourner la vis de réglage et mettre l'aiguille sur environ 12% d'humidité relative.
